## Skills for Industry's first Level 6 success

My current role as Project Manager I am responsible for the construction of a new footbridge for the new music arena for Bristol City Council. It's a 60m single span, steel box girder bridge with a very high specification and demanding architect. This is my second bridge project in this region in the last 2 years, in 2016/17 I project managed Castle Bridge, a complex S shape bridge, the entire structure was built from the water. Castle Bridge received an award from ICE Wales for best designed project in Wales.

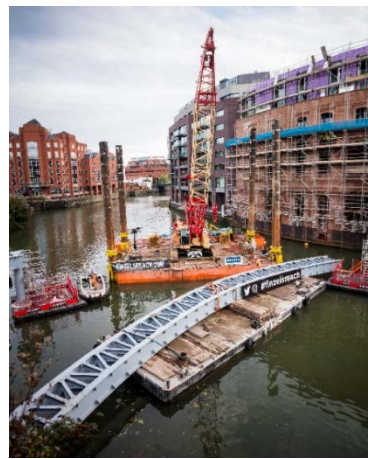

The NVQ level 6 was very good and helped to further reinforce my knowledge in the industry. It turned out to be a great stepping stone for further learning and professional development. My assessor Peter Jones was very helpful throughout, whenever I asked for it.

Within next 2 years I'd like to obtain my Master's degree in Project Management and then become a chartered Project Manager. In 12-15 years, I hope to become a contract manager and then progress to regional manager or operations manager in 20 years' time.

Peter Jones, Assessor, said '*Jamie was highly motivated and well organised with his studies. With a little support, it was interesting to observe Jamie's academic writing develop over the period of the course. I am sure with his positive attitude he will be successful in his academic aspirations*'.

Castle Bridge 2017

St Philips Bridge 2018 (still under construction)
